## This innovative system optimizes functionality and performance of the medical device, and exalts the therapeutic results of the orthotic application.

EASY UP DYNAMIC® footwear is created to accommodate dynamic braces.
The revolutionary peculiarity of these brace-carrying shoes is highlighted by the characteristics described below, which allow the correct approach to the biomechanical development of the step. This innovative system optimizes the functionality and performance of the medical device and enhances the therapeutic results of the orthotic application.

**A** - The upper, made of leather and technical materials, allows front and rear flexibility, with reinforcements that guarantee the stability of the rear foot to facilitate its dynamism.

**B** - The Flex sole with E.V.A. with double degree of density, it helps to provide more stability in the back - foot / meso - foot and greater flexibility in the forefoot, ensuring ergonomic roll support to complete the take-off phase by improving dynamism. Thanks to the presence of small suction cups, the Vibram tread with a thickness of 4 mm helps the grip effect of the shoe in contact with the ground.
Furthermore, the sole maintains the possibility of being worked according to individual needs, to allow for a better and correct posture.

**C** - EASY UP DYNAMIC® shoes with BOA FIT® lacing regulate the grip of the brace by locking it with a steel wire, to allow a single movement that facilitates the thrust and momentum of the step.

DYNAMIC®
Innovation at your feet

EASY UP DYNAMIC

BOA® DIALED IN. PRECISION FIT.

Just a click
and everything is simpler

Handmade in Italy, EASY UP DYNAMIC® shoes are designed to be worn easily and independently by all those with limited mobility who wear dynamic braces.

Thanks to the rear spoiler that opens completely allowing you to slide your foot inside, and the lacing system BOA® then allows you to completely close the spoiler, adapting the shoe to your foot.

Moreover, thanks to this system there will no longer be annoying pressure points on the instep, always keeping the shoe fastened in the most suitable way.
